Poverty and inequality in Edinburgh: Neighbourhood Partnership profiles

Recent research shows that one in five households in Edinburgh live on incomes below the poverty threshold set by the UK Government. Despite the affluence and success of the city's economy, this is a level of poverty higher than the national average and higher than most other local authorities in Scotland.

Within the city, poverty levels vary considerably between neighbourhoods. In the poorest parts of Edinburgh over 27% of all households live in poverty compared to fewer than 17% of households in more affluent areas.

This profile provides a snapshot of data on poverty and income inequality in the Almond Neighbourhood Partnership area. It is one of 12 similar profiles for all Neighbourhood Partnerships intended to support the development of strategies and action plans to reduce poverty and inequality in our city.

The information presented here is built on analysis carried out for the Edinburgh Partnership Poverty and Inequality Theme Group. More information on the work of this group in the city can be found on the City of Edinburgh Council [website](#).

Each profile contains:

- A short note defining the key poverty indicators used in the report
- Information on the number of households living in poverty in each Neighbourhood
- Information on levels of benefits dependency and other measures of inequality
- Links to other resources and profiles providing information on inequality in each Neighbourhood.

Definitions and data sources

These profiles use the following broad definition of poverty:

“People are said to be living in poverty if their income and resources are so inadequate as to preclude them from having a standard of living considered acceptable in the society in which they live.”

The following four key indicators are used to measure the extent of poverty in each neighbourhood partnership area (NP):

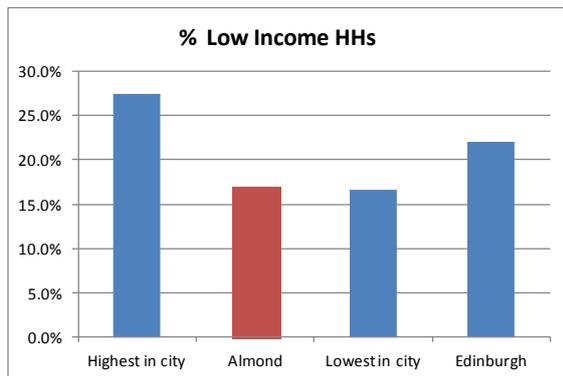

- **Low income Households:** The proportion of households who live on incomes below the poverty threshold (after housing costs). The UK Government defines this threshold as being a level of income below 60% of UK median. For a couple with two children, this threshold is currently estimated at £357 per week. For a single person household, the threshold can be as low as £128 per week.
- **Material Deprivation:** The proportion of households unable to afford a specific set of goods and services regarded as essentials for life in Britain today by a majority of the population.
- **Child Poverty:** The proportion of children (aged under 20) living in households whose income is below the UK Government poverty threshold.
- **Average Weekly Income:** This represents the gross weekly household income.

Data for all of these indicators has been drawn from a 2013 report on income and poverty for small areas across Scotland, commissioned by the [Improvement Service](#) and part funded by City of Edinburgh Council. Detailed information on the results of the research for Edinburgh is available on the Council [website](#).

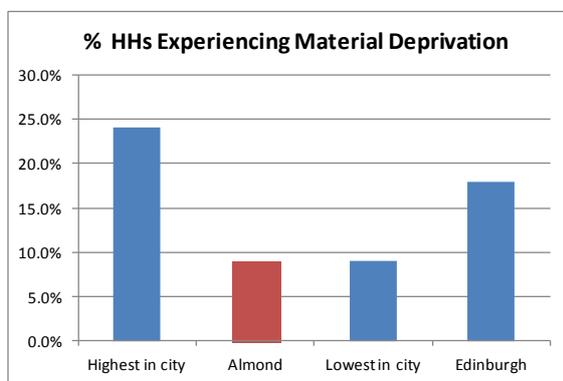

Data presented in the report for these measures relates to the year 2009 and represents a baseline snapshot of poverty in the city. These data represent the most up to date information available for the city on these important indicators.

More current estimates of households on very low incomes are provided by looking at the proportion of adults who receive DWP benefits. The last section of this profile provides an overview of benefits dependency and other measures of inequality in each neighbourhood. Data for this analysis has been drawn from the [NOMIS website](#) and provides information on Department for Work and Pensions (DWP) benefits claimants up to May 2013. Detailed descriptions of the benefits included in the information pack produced to accompany these profiles.

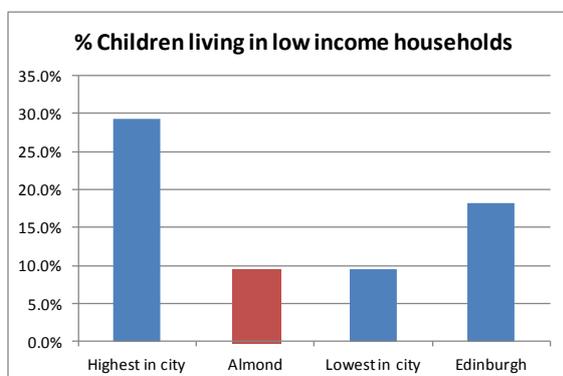

Headline poverty and inequality indicators

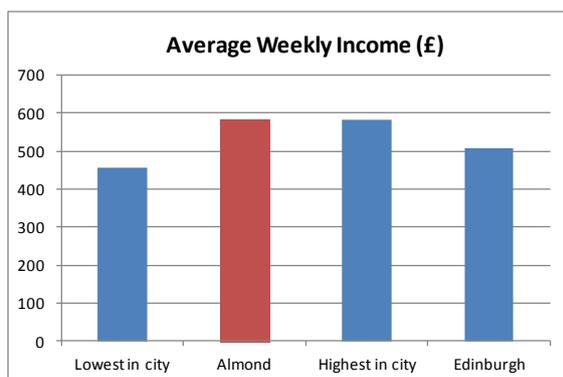

- 1,750 households in Almond live on incomes below the poverty threshold
- This represents 17% of all households in the NP. Almond has the lowest incidence rate of poverty of all NPs, and records a rate well below the city average of 22%.
- Almond accounts for 4.7% of all the households in Edinburgh but only 3.6% of all low income households

- 930 households in Almond experience material deprivation. These are households unable to afford several items regarded by a majority of the population as essentials for life in Britain
- This represents 9% of all households in the NP the lowest rate in the city. Almond accounts for only 2.3% of all Edinburgh households experiencing material deprivation

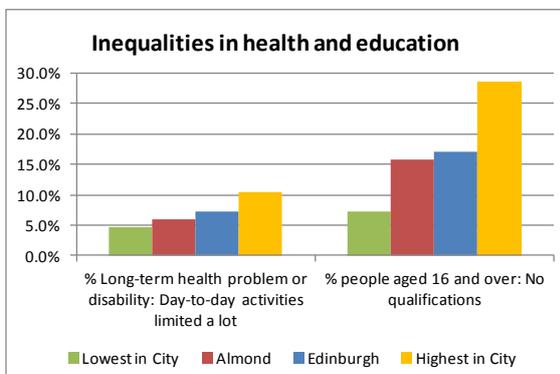

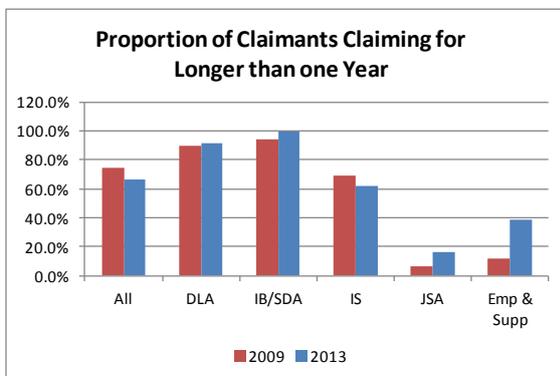

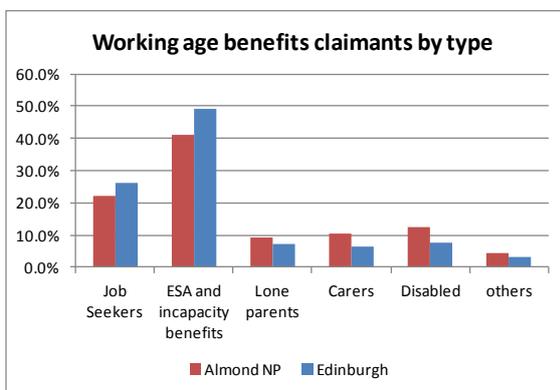

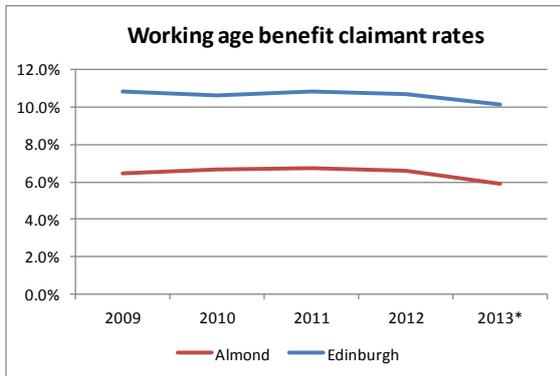

- 590 children in Almond live in households whose income is below the poverty threshold.
- This represents 9.6% of the population in the age group compared to 18.2% in the city as a whole, the lowest rate of any NP in the city
- Almond accounts for 3.4% of all children in low income households in the city

- In 2009 NP the average weekly income was estimated at £582, the highest of any NP and some 15% above the city.
- The average weekly income in the city in 2009 was estimated at £508

Benefits dependency and other measures of inequality

- These figures represent the percentage of working age people who are claiming a range of key DWP benefits
- At May 2013, 5.9% of the working age population in Almond were dependent on DWP benefits, the second lowest rate of any NP. This compares to a rate of 10% for Edinburgh as a whole
- A detailed definition for all the benefits included here is included in the information pack which accompanies these profiles.

- Job seekers and ESA/Incapacity Benefit claimants accounted for only 63.2% of all claimants in Almond, compared to 75.3% in the city as a whole
- By contrast, Almond recorded the highest proportion of “Carers” (10.7%) and “Disabled” (12.6%) claimants of any NP in the city

- Long term benefits dependency is a useful measure of persistent low income and social exclusion.
- The proportion of claimants in Almond claiming for over one year fell from 74.6% in 2009 to 66.4% in 2013. Long term benefits dependency rates are slightly below the city average of 69%.
- Long term job seekers increased from 6.7% to 16.7% over 2009 to 2013.

- 6% of Almond residents had a limiting long term health problem in 2011, while 15.9% had no formal qualifications. On both these measures, the NP ranks below the city average.
- The [City of Edinburgh Council](#) website provides a comprehensive insight into a range of Census data for Neighbourhood Partnerships.
